## UVODNO POJASNILO

**Spoštovani člani delovnih skupin za odbiro in ocenitev bikov, selekcionisti in drugi izvajalci strokovnih nalog v govedoreji!**

Pred vami je delovni katalog za leto 2016. Z izjemo mesnih pasem, smo za vsako pasmo pripravili svoj delovni katalog, ki služi posamezni delovni skupini pri odbiri.

Uvodno pojasnilo k katalogu je v vseh katalogih enako. Razlike med katalogi (posebnosti prikaza podatkov za posamezno pasmo) so v uvodu posebej poudarjene.

V prvem delu delovnega kataloga za leto 2016 so, z izjemo pri mesnih in cikasti pasmi, predstavljeni testirani (klasično/genomsko) biki, ki imajo zalogo semena ter so potencialni kandidati za osemenjevanje v sezoni 2016, sledijo čakajoči in še živi biki v osemenjevalnih središčih Ptuj - Murska Sobota in Preska. Izbor bikov je opravil osemenjevalni center v sodelovanju s strokovnimi tajniki za posamezno pasmo.

V katalogu za posameznega bika navajamo **na prvi strani** osnovne podatke o biku in njegovem poreklu (slika 1).

Slika 1: Shematičen prikaz prve strani za posameznega bika

## OSNOVNI PODATKI O BIKU

1

Ime, republiška številka plemenskega bika in identifikacijska številka bika;

- **genetske posebnosti** pri bikih, ki so bili laboratorijsko testirani ali so/niso nosilci genetskih posebnosti, navedenih v preglednici 10.
- delež pasem (razen pri ČB pasmi) in genotip za mlečno beljakovino kappa-kazein
- datum rojstva in direktni test: leto zaključka testa, prirast od 165 do 365 dneva in napoved plemenske vrednosti (PV) za to lastnost
- naslov rejca teleta

Vir podatkov so Centralna podatkovna zbirka Govedo, Kmetijski inštitut Slovenije ter potrdila o poreklu.

Genotipi za mlečno beljakovino kappa-kazein so označeni z AA, AB, BB in EE, želeni genotip je BB.

2

**Telesne mere bika**, oznake po vrstnem redu pomenijo:

v.v. višina vihra,

v.k. višina križa,

gl.p. globina prsi,

š.p. širina prsi,

o.p. obseg prsi,

š.k. širina križa,

d.t. dolžina telesa,

**masa** telesna masa.

Vir podatkov so vsakoletna merjenja, ki jih opravijo predstavniki območne selekcijske službe in delovne skupine za odbiro in ocenitev bikov ter merjenja ob koncu direktnega testa v vzrejališču.

3

**Podatki o rangu** bika za nekatere lastnosti mlečnosti za dnevne kontrole (DK), ki izhajajo iz zadnjega domačega (SI) oziroma INTERBULL (IN) avgustovskega obračuna plemenskih vrednosti. Interbull-center za Slovenijo obračunava plemenske vrednosti za lastnosti količin: mleka, maščob in beljakovin, ne obračunava pa lastnosti vsebnosti. Poleg omenjenih treh lastnosti smo izračunali še indeks beljakovin in maščob (IBM). Rang za posamezno lastnost podajamo v odstotkih; izpisane so tudi napovedi plemenskih vrednosti za te lastnosti. Pri SI so podane absolutne vrednosti PV, pri IN pa PV12. V zadnjem stolpcu (N) pa je prikazano število vseh živali, uvrščenih v izračun ranga za posamezno lastnost.

Pri večini bikov **mesnih** pasem so na tem mestu podane tudi **ocene zunanjosti** preračunane na 100. Navajajo se ocene za sklope lastnosti: mišična razvitost, razvitost skeleta, pasemske lastnosti, funkcionalne lastnosti. Ocene preračunane na 100 pomenijo kakšen odstotek od maksimalne ocene je dobil posamezni bik za vsak sklop lastnosti. Bike je ocenil strokovni tajnik za mesne pasme.

Pri bikih **cikaste** pasme na tem mestu navajamo dodatne mere, ocene in lastnosti pri posameznem biku. Vsebino je pripravil strokovni tajnik za cikasto pasmo.

4

Delovna skupina za ocenitev in odbiro bikov vsako leto vsem živim bikom v osemenjevalnih središčih in testiranim bikom z zalogo semena, ki so potencialni kandidati za uvrstitev v osemenjevanje v naslednji sezoni, določi plemenski razred živali ter kategorijo in razred uporabe. **Plemenski razred živali** se določi na podlagi porekla, lastnega testa, lastnosti zunanjosti in rezultatov testiranja na potomstvu (šifrant je v preglednici 4. Pri ocenjevanju in odbiri se bikom določi **kategorijo** (šifrant je v preglednici 5) in **razred uporabe** (šifrant je v preglednici 6).

**5** Delovna skupina za ocenitev in odbiro bikov vsako leto oceni vse žive plemenske bike v osemenjevalnih središčih glede na **okvir (OK)**, **obliko (OB)** in **omišičenost (OM)**.

**6** **Pogostnost prirojenih in drugih napak** pri teletih potomcih posameznega bika - če so bile pri teletih opažene in zabeležene napake, so navedene, podano je tudi število opažanj.

**7** **Podatki o plodnosti** – navajamo število prvih osemenitev v posameznem letu, skupno število prvih osemenitev, non - return (% NR), veterinarsko oceno za konstitucijo ter plodnost (šifranta sta v preglednicah 8 in 9) in podatke o zalogah semena v posameznem letu. NR za leto 2015 je izračunan na 60. dan za obdobje od 1.7.2014 do 31.8.2015, torej za osemenitve od 1.7.2014 do 30.6.2015. Za leto 2015 se navaja število prvih osemenitev za obdobje od 1.1.2015 do 31.8.2015. Vir podatkov je osemenjevalno središče, veterinarske ocene pa pripravi Veterinarska fakulteta.

**8** **V poreklu bika** navajamo starše, stare starše ter očete starih mater. Pri očetu bika navajamo za lastnosti mlečnosti poleg povprečnih vrednosti in plemenskih vrednosti iz domačega obračuna (SI) še plemenske vrednosti iz mednarodne primerjave - INTERBULL (IN). Glede na število vseh bikov, zajetih v mednarodno primerjavo, je za vsakega bika izračunan tudi rang v odstotkih. Izračun ranga je enak kot ga navajamo že pri razlagi podatkov o rangu za posameznega bika.

Pri materah in starih materah navajamo podatke za mlečnost v standardni laktaciji. Navajamo količino mleka, količino in vsebnost maščobe ter beljakovin v mleku za največjo laktacijo ter povprečja znanih laktacij. Podane so napovedi plemenskih vrednosti za te lastnosti ter IBM.

## SKLOPI LASTNOSTI

Na drugi in tretji strani so podani rezultati zadnjega napovedovanja plemenskih vrednosti za posamezni sklop lastnosti. Vir podatkov za vključene napovedi plemenskih vrednosti je Center za strokovno delo v živinoreji, Biotehniška fakulteta, Oddelek za zootehniko.

Za vsako lastnost pri biku poleg imena lastnosti in merske enote ali opisa mejnih vrednosti, podajamo še naslednje rezultate napovedovanja plemenskih vrednosti (PV):

R ocenjena točnost napovedi plemenske vrednosti v odstotkih,

N število potomcev, katerih meritve smo upoštevali pri napovedovanju PV,

Povpr. povprečna vrednost meritev potomcev,

PV plemenska vrednost, izražena absolutno v enotah merjenja,

PV12 standardizirana plemenska vrednost (en standardni odklon je 12 točk):

$$PV_{12,ij} = ((PV_{ij} - \bar{PV}_i) / SD_i) \times 12 + 100, \text{ pri čemer je:}$$

SD - standardni odklon obravnavane lastnosti,

i – indeks za populacijo, j – indeks za žival

Graf v grafičnem delu izrišemo PV12. Graf je postavljen tako, da je za rejca želena vrednost na desni strani, nezaželena vrednost pa na levi strani grafa. Izjema je nekaj lastnosti iz sklopa telesne lastnosti (hrbet, nagib križa, skočni sklep, biclji, parklji in lastnosti seskov (debelina, dolžina, položaj, namestitev), pri katerih so želene vrednosti v drugačnem razponu. Pri teh lastnostih je na grafičnem prikazu želeno območje (želena vrednost za  $PV12 \pm 5$ ) označeno z okvirčkom.

Za vse lastnosti so bile plemenske vrednosti napovedane z modelom živali (preglednica 1).

Preglednica 1: Metodika napovedovanja plemenskih vrednosti po sklopih lastnosti

| Sklop lastnosti                          | Metode                      |
|------------------------------------------|-----------------------------|
| Mlečnost                                 | ponovljivostni model živali |
| Plodnost in potek teilitve*              | model živali                |
| Telesne lastnosti prvesnic               | model živali                |
| Telesne lastnosti telet                  | model živali                |
| Pitovne in klavne lastnosti              | model živali                |
| Skupni selekcijski in vsi ostali indeksi | izračun za živali           |

### Sklop skupni selekcijski indeksi

Tako kot indeksa telesnih lastnosti tudi skupni selekcijski indeks računamo za dve tržno-ekonomski situaciji, in sicer za prirejo mleka (MLEKO) in kombinirano rejo s poudarkom na prireji mesa (MESO- MLEKO). V posameznem skupnem selekcijskem indeksu so združene gospodarsko pomembne lastnosti za posamezno usmeritev, ki so tehtane z relativnimi ekonomskimi težami in so prilagojene za različne gospodarske usmeritve. Uteži s katerimi tehtamo plemenske vrednosti iz posameznih sklopov lastnosti so tokrat za rjavo pasmo nekoliko drugačne kot za lisasto in črno-belo. V skupna selekcijska indeksa za rjavo pasmo je dodan tudi fitnes, ki vključuje plemensko vrednost za število somatskih celic. Relativne uteži oz. pomen posameznih sklopov lastnosti pri izračunavanju skupnih selekcijskih indekov po pasmah prikazujemo v preglednici 2 .

Preglednica 2:Relativne uteži za izračun skupnega selekcijskega indeksa za posamezne sklope lastnosti za tržno ekonomski situaciji *mlečna* in *kombinirana* reja po pasmah

|                     | Skupni selekcijski indeks po pasmah |             |                  |             |                  |

### **Lastnosti mlečnosti**

Prikazani so rezultati napovedovanja plemenskih vrednosti za šest lastnosti mlečnosti, ki so vrednotene na podlagi podatkov za dnevne kontrole. Podane so lastnosti količina mleka, količina in vsebnost maščob, količina in vsebnost beljakovin ter indeks beljakovin in maščob (IBM). IBM izračunamo iz standardiziranih plemenskih vrednosti (PV12) za količino beljakovin in količino maščob. Pri indeksu IBM tehtamo PV12 za količino beljakovin z utežjo 0,8 in PV12 za količino maščobe z utežjo 0,2. V tem sklopu so vključene tudi plemenske vrednosti za lastnosti: število somatskih celic (SSC), sečnino (ureo) in laktozo v mleku, ki so obračunane na podlagi podatkov dnevnih kontrol.

Kot zadnjo v tem sklopu podajamo plemensko vrednost za iztok mleka, ki se pri večini pasem ocenjuje z ocenami od 1 do 5, pri čemer pomeni 1 zelo počasen, 5 pa zelo hiter iztok mleka.

## **Plodnost in potek telitve**

Sklop vključuje lastnosti: doba med telitvama (DMT), starost ob telitvi in težavnost telitve. Potek telitve navajamo za bika očeta prvesnic in bika očeta telet.

## **Druge lastnosti**

V ta sklop smo vključili druge lastnosti (dolgoživost, temperament in gibanje), ki jih ni mogoče uvrstiti v posamezne vsebinske sklope.

## **Pitovne in klavne lastnosti**

V sklopu pitovnih in klavnih lastnosti bikov so vse analizirane lastnosti standardizirane in enake za vse bike ne glede na njihovo starost. Sočasno pa so napovedi PV primerljive za vse do sedaj testirane bike lisaste pasme.

V sklopu pitovnih in klavnih lastnosti bikov sta prikazana dva dnevna prirasta telesne mase in dnevni neto prirast, ki je v bistvu prirast klavnih polovic.

Masa klavnih polovic je standardizirana in pomeni lažjo direktno primerjavo zmogljivosti rasti ocenjenih bikov.

Za oceno klavnih polovic na liniji klanja in s tem za uvrstitev klavnih polovic v cenovne razrede sta pomembna skupna ocena klavnih polovic in indeks konformacije. Za presojo uporabne vrednosti klavnih polovic prikazujemo delež mesa in delež kosti v klavni polovici. Obe omenjeni tkivi sta standardizirani na enak odstotek lahko ločljivega loja. Pomeni, da primerjamo sestavo klavnih polovic vseh ocenjenih bikov med seboj pri enakem deležu loja v klavnih polovicah.

**Indeks za prirast** zajema vse tri dnevne priraste, med njimi pa ima največjo gospodarsko težo dnevni neto prirast. **Indeks klavnih lastnosti** vključuje poleg mase toplih polovic tudi indeks konformacije in delež mesa v klavnih polovicah. V **skupnem indeksu** imata enako gospodarsko težo oba delna indeksa.

## **Telesne lastnosti** ocenjene na prvesnicah

Te lastnosti lahko delimo na merjene, opisne in ocenjene lastnosti. Pri prikazu plemenskih vrednosti za merjene lastnosti je poleg lastnosti navedena merska enota. Pri ocenjenih lastnostih pa so navedene mejne vrednosti.

Pod Povpr. se prikazujejo povprečne vrednosti lastnosti hčera. Pri večini lastnosti je želena čim večja vrednost PV12. Izjeme so lastnosti:

- hrbet, nagib križa, skočni sklep, lastnosti seskov (debelina, dolžina, položaj, namestitev prednjih, namestitev zadnjih), kjer je **želena vrednost za PV12 = 100**.

Te lastnosti so označene z eno zvezdico (\*). Poleg tega je pri teh lastnostih na grafičnem prikazu želeno območje (želena vrednost za  $PV12 \pm 5$ ) za posamezno lastnost označeno z okvirčkom.

Za lastnost:

- biclji je **želena vrednost za PV12 = 109**, torej za 0,75 standardne deviacije večja od povprečja, v prikazu je lastnost označena z dvema zvezdicama (\*\*).

Za lastnost:

- parklji je **želena vrednost za PV12 = 118**, torej za 1,5 standardne deviacije večja od povprečja, v prikazu je lastnost označena s tremi zvezdicami (\*\*\*)

Indeks za okvir (IND. OKVIR) se izračuna iz PV12 za lastnosti višina križa, širina in globina, ki ima v indeksu največji pomen. Pričakujemo tudi indeksa telesnih lastnosti, glede na namen uporabe. Pri izračunu indeksa za prievo mleka (IND. MLEKO) so lastnosti okvira tehtane z gospodarsko težo 0,27, lastnosti oblik prav tako z 0,27 in lastnosti vimena z gospodarsko težo 0,46. Pri izračunu indeksa za kombinirano usmeritev s poudarkom na prievo mesa (IND.

MESO-MLEKO) so lastnosti okvira tehtane z gospodarsko težo 0,59, lastnosti oblik z 0,29 in lastnosti vimena z gospodarsko težo 0,15.

Za **bike mesnih pasem** prikazujemo le del napovedi plemenskih vrednosti obračunanih na rjavi, lisasti oziroma črno-beli populaciji. Iz drugega sklopa (Potek telitve) prikazujemo le lastnost telitve-oče telet, poleg te lastnosti prikazujemo tudi celotni četrti sklop (Telesne lastnosti telet).

## UPORABLJENI ŠIFRANTI
